AI SYSTEMS / LLM ENGINEERING INTERN

Building AI systems that focus on **LLM reliability**, **multi-step pipelines**, and **retrieval-based architectures**.

Experience working on real-world issues such as **inconsistent model outputs**, **structured response enforcement**, **deduplication in automated workflows**, and **multi-agent orchestration**, rather than isolated AI demos.

CORE SKILLS

- **AI Systems:** LLM Pipelines, RAG (Local + Multimodal), AI Agents, Structured Outputs, Prompt Engineering
- **Retrieval:** FAISS, Chroma, Embeddings, Reranking
- **Backend:** FastAPI, Flask, Node.js
- **Automation:** n8n, Playwright, Workflow Orchestration
- **Frontend:** React, TypeScript, TailwindCSS, CopilotKit
- **Tools:** Git, Linux

EXPERIENCE

XORSTACK | AI/ML Engineering Intern | Bangalore

2026 – Present

- Built a **time-driven automation pipeline** that processes multi-source inputs, filters data, and feeds structured inputs into LLM workflows
- Designed a **multi-model LLM pipeline** with strict output formatting and fallback parsing to handle malformed or inconsistent responses
- Implemented a **deduplication mechanism using persistent queue logic**, eliminating repeated processing across scheduled runs
- Developed a **local RAG system** for querying documents using embeddings and locally hosted models
- Built internal components addressing **LLM reliability issues (JSON inconsistency, parsing failures, output validation)**
- Contributed to AI-assisted content workflows involving **grammar correction, rewriting, and structured content generation**

PROJECTS

LLM Output Reliability Engine

Focused on solving a core production issue: unreliable LLM outputs

- Enforced structured JSON outputs using validation and controlled prompting
- Implemented retry and fallback parsing for malformed responses
- Designed checks for incomplete or inconsistent outputs
- Improved stability of multi-step AI workflows

Context-Aware RAG System (with Reranking)

Built a retrieval pipeline focused on improving context quality

- Implemented semantic search using embeddings
- Added reranking layer to refine retrieved context
- Generated responses grounded in retrieved data
- Reduced irrelevant context during testing

LLM Workflow Debugger & Observability Tool

Designed a system to debug and monitor AI pipelines

- Tracked prompts, outputs, retries, and errors across workflow steps
- Added visibility into failure points and parsing issues
- Improved debugging of multi-step LLM systems

AI Editorial Assistant (CMS Integration)

- Built an AI assistant integrated into a content editing interface
- Enabled grammar correction, rewriting, and SEO suggestions
- Designed backend logic for routing AI tasks and processing outputs

Code available upon request due to confidentiality of internship work

EDUCATION

B.E. | Information Science & Engineering | CGPA: 7.6 | Nitte Meenakshi Institute of Technology

2022 - 2026

PU | PCMC | 78.16 % | Sri Chaitanya PU College, State Board

2021 - 2022

Class X | 72.2 % | Sri Chaitanya Techno School, CBSE

2019 - 2020
